

ECOSIL – G PLUS™

Content

Soluble Silica and Amino Acid.

Features-

1. Ecosil-G Plus is useful to strengthen the cell walls and helps the plants to build strong branches and stems those are reinforced enough to support the plant.
2. Ecosil- G Plus is useful to create bigger Stalks and stems those can uptake and transport more water, nutrients and plant secretions throughout the plant, facilitating faster growth rates.
3. Silicon forms a protective coating on an intracellular level that decreases the amount of water loss through transpiration, making plants less likely to suffer during drought conditions. It also enables them to continue functioning during high- temperature or low moisture conditions.
4. Amino Acids are fundamental ingredients in the process of protein synthesis. Amino Acids can Directly or indirectly influence the physiological and combining it with the Nitrogen which the plant obtains from the soil.
5. Ecosil G Plus plays an important role in reinforcing the cell walls of plants and it helps giving plants increased resistance to pests and diseases, increased tolerance to drought.

Target Crops-

All kharif, Rabbi and Summer Season crop (Fruits, Vegetables, Flowers and grain crops used)

Target Work-

It improves fertility of crops and soil

Dosage-

Use 2 kg per Acre. Apply 4 to 6 times depending on soil and condition.

Packing-

1 Kg.
